FDF Creation

CREATING A FORM IN WHICH DATA CAN BE SAVED

1. Create the FDF

2. Go to Advanced/Extend Features in Adobe Reader and click SAVE NOW. Give this file a new name because you cannot edit it once you turn on your features. If you have to make changes, you will need an original document to go back and change.

3. The form is now ready to be opened in Adobe Reader and the user can save the completed form to their computer.
